(54) Feed and process for production thereof

(57) A feed made of fish meal, especially an enriched feed for use with edible animals (living feed), which are to be given to fry. The meal is micronised with a particle size which is adjusted in groups according to the size of the edible animal. The micronised meal can be mixed with fat and vitamins and can be homogenised with this. A soft dry feed is especially for use as weaning feed for fry, at the transition from living feed to formulated feed. It consists of hard roe-like agglomerated particles, which are made of micronised fish meal, fat bonding agent, vitamins and minerals. The feed has a water content of below 14 weight %.
